Human Physiology Collection

Giving students a clear understanding of core concepts

Lt is an online learning platform that engages students with real data, inside and outside the lab.

Our Human Physiology Collection includes customizable lessons, grouped into modules. Each module contains a combination of background lesson(s), pre-lab prep(s), and/or lab(s). Combine lessons with our hardware teaching systems and kits to provide a true-to-life, practical learning experience for your students in the lab, or use Lt's pre-recorded example data for remote learning situations.

Professionally-developed lessons

Lessons in our Human Physiology Collection reinforce introductory and advanced concepts across a wide range of topics including cardiovascular and circulatory, respiratory, nervous, gastrointestinal, muscular, kidney and urinary physiology, and more.

Each media-rich lesson is designed to maximize engagement with a strong focus on student outcomes. Use our lessons off-the-shelf or tailor any lesson to suit your curriculum and your teaching preferences.

Lessons can be grouped, and ordered per your course needs.

"I have 1000 students each semester, but my labs run smoother with Lt."

Aura Grandidge,
Manager Biology Labs, Anatomy and Physiology,
University of Rhode Island

Improved efficiency

Increased student engagement

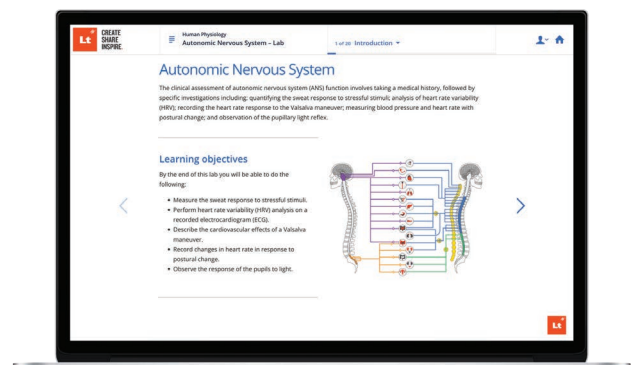

Improved results in theory and clinical practice

Increased student pass rates*

*Results of using Lt at the Otago Polytechnic School of Nursing, 2017

making science easier

Human Physiology Collection

38 MODULE COLLECTION

Airflow

Record spirometry signals to examine FEV₁ in normal and simulated airway restriction. Perform peak flow tests.

Auditory System – Mini Lab

Use a tuning fork to conduct Rinne and Weber tests. Perform a modified audiometry test to determine the hearing threshold for different sound frequencies.

Autonomic Nervous System

Examine skin potential changes, heart rate variability, the Valsalva maneuver, rapid postural change, and pupillary exercises.

Blood Clotting

Assess bleeding and coagulation time, and use a hemocytometer to perform a platelet count and calculate the number of platelets per μL of blood.

Blood Counting

Prepare a blood smear and identify different blood cells under a microscope. Determine the hemoglobin concentration using a spectrophotometer and perform a hematocrit test. Determine blood type using Eldon cards.

Blood Pressure

Measure blood pressure in the arm and assess the effect of cuff location, cuff size, and arm position. Examine how leg position affects leg blood pressure.

Body Temperature

Measure body temperature and explore the differences between conductive and convective heat loss.

Brain Structure and Reflexes

Revise major human brain structures and view MRI and CT scans. Test the knee and ankle jerk reflex responses with and without the Jendrassik maneuver. Assess pupillary and plantar reflexes.

Breathing

Use a respiratory belt to investigate the ability to hold the breath and the relationship between breathing and heart rate.

Cardiorespiratory Effects of Exercise

Record and compare ECG, blood pressure, and respiratory movements at rest, during exercise, and immediately after exercise.

Cardiovascular Effects of Exercise

Record and compare ECG and the finger pulse at rest and immediately after exercise.

Cold Pressor Test - Mini Lab

Measure blood pressure by auscultation and carry out the cold pressor test. Use a blood pressure sensor and a finger pulse sensor to measure blood pressure, heart rate, and pulse amplitude continuously whilst observing a bodily extremity's reaction to extreme cold.

Diving Response

Investigate the effects of simulated dives and breath holding on heart rate and peripheral circulation.

Electroencephalography (EEG)

Record EEGs to examine interfering signals, changes with eyes open and shut, and the effects of mental and auditory activity.

Electrooculography (EOG)

Record EOGs to examine angular displacement, saccades, smooth tracking, gaze-holding, gaze-shifting, and nystagmus.

Endocrine Physiology

Investigate hormone feedback loops with real-life scenarios. Use critical thinking skills to identify a hormone administered to a "virtual" rat by analyzing changes in the animal's organ weights.

Key: ● No sensor required

● PowerLab Human Physiology Collection - 38 Modules

● Lt Sensors Human Physiology Collection - 29 Modules

Energy Expenditure and Exercise

Measure the FEO_2 , FECO_2 , and RER during steady-state exercise, as well as ventilatory changes and changes in mechanical efficiency.

Glucose Absorption

Measure blood glucose using a glucolet and glucometer and compare results from five protocols. Take urine samples to measure glucose levels.

Heart and ECG

Measure the ECG and pulse, compare variations between the different leads of a 12-lead ECG, and perform an Einthoven triangle analysis.

Heart and Peripheral Circulation

Practice palpation techniques on arm and leg arterial pulses, record the radial pulse, and examine arterial anastomoses in the hand.

Heart Sounds

Listen to heart sounds via a stethoscope and phonocardiogram (PCG), and record an ECG and pulse to investigate the relationship between ECG events and heart sounds.

Hoffmanns Reflex

Stimulate the tibial nerve to measure the Hoffmann's reflex. Determine how the latency and amplitude of the M-wave and H-reflex change under different conditions.

Kidney and Urine

Estimate bladder capacity, view an abdominal CT scan, and perform urine testing and observation on "patient" urine samples.

Lung Volumes

Record and analyze spirometry signals to perform basic tests of pulmonary function and simulate breathing with hyperinflated lungs.

Mechanical and Chemical Digestion

Explore the effects of mechanical and chemical digestion on the breakdown of three different food substances that represent the macronutrient classes: carbohydrate, protein, and lipid.

Mechanics of Ventilation

Measure pressures generated passively and by contraction of expiratory and inspiratory muscles. Use spirometry to determine lung volume.

Muscle and EMG

Record EMG during voluntary muscle contractions to investigate coactivation, muscle fatigue, and how visual and verbal feedback impact the ability to sustain muscle contractions.

Myotatic Reflex - Mini Lab

Trigger the myotatic reflex on a volunteer by stimulating the patellar tendon. Observe the effects of the Jendrassik maneuver on the myotatic reflex.

Peripheral Nerve Function

Record an evoked EMG, then calculate latency and nerve conduction velocity.

Reflexes and Reaction Times

Examine simple reflexes, and then explore reaction times to stimuli under different conditions.

Reproductive Physiology

Learn how reproductive anatomy develops at birth and how it matures and responds to puberty. Investigate how the hormones of the hypothalamic-pituitary-gonad axis interact with reproductive organs in both the testicular and oovterine systems. Explore hormonal control of the menstrual cycle in the oovterine reproductive physiology lab and perform sperm count and motility measurements in the testicular reproductive physiology lab.

Respiratory Sinus Arrhythmia (RSA) – Mini Lab

Evaluate the magnitudes of heart rate variability due to different types of respiration (normal, fast, and deep) using a respiratory belt sensor and biopotential sensor.

Sensory Illusions

Investigate mechanisms of sensory perception and discover techniques that send conflicting information to the central nervous system.

Sensory Physiology

Observe a range of sensory illusions.

Skeletal Muscle Function

Record and measure muscle twitch responses, observe recruitment as stimulus strength increases, and explore muscle twitch summation and tetanus.

Stroop Test

Investigate the interference of conflicting messages, and examine the effects of the Stroop test as an experimental stressor.

Thermoregulation – Mini Lab

Compare the distribution of sweat glands on a volunteer's hand versus their arm using Lugol's iodine. Additionally, use a temperature probe to measure the heat released through vasodilated capillaries during exercise.

Water Balance

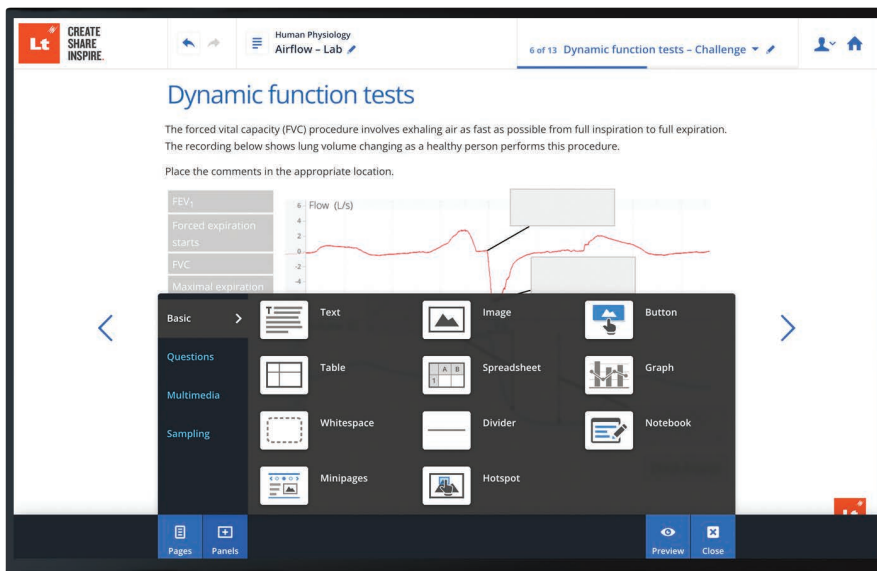

Drink a variety of solutions, then collect and measure the volume and specific gravity of the resulting urine over two hours.

A module may include background lesson(s), pre-lab prep(s), and/or lab(s).

“It allows me and my colleagues to collaborate on lesson plans in real-time.”

Dr James Clark,
Senior Lecturer,
Human and Applied Physiology,
King's College, London

Right: Record data effortlessly on macOS® and Windows with Lt Sensors

How can Lt help?

Educators

Authoring and customization

Easily edit, share, and update our content or create your own in real-time, wherever and whenever you need. Drag-and-drop a range of content types including video, audio, images, quizzes, and text directly into your lessons.

Collaborative

Share content and workload with your fellow educators and teaching assistants. Set varying levels of access to allow others to review content, add content, or publish revisions online.

Flexible grading

Automatically grade quizzes while keeping the flexibility to add feedback and positive reinforcement, and manually grade written assessments.

Supporting your Lt journey

When you sign up to Lt, you become part of our global community of Lt collaborators. We provide you with ongoing support, including a dedicated Customer Success Manager during onboarding and beyond to ensure you're meeting your teaching objectives.

Administration

Simple setup

Lt needs only an internet browser to allow course administration, authoring, and publishing. Our data acquisition app, used for sampling, installs in 30 seconds.

Analytics

Our analytics allow you to view class progress in each lesson and section in your course, and provide valuable insights about where and how students are interacting with course material.

Secure and scalable

Totally secure, Lt is hosted on Amazon Web Service's encrypted servers with guaranteed 99% uptime and the ability to maintain speed as more students login to Lt.

Future-proof

Lt is automatically updated with new features by our team of engineers, developers, and education specialists.

Students

Learn anywhere, anytime

Lt's cloud-based platform means students can learn on almost any device that connects to the internet. Whether they use iOS or Android, tablet, mobile, or laptop, lessons will be resized to suit.

PowerLab and Lt Sensor integration

In the lab, students can record and view their own physiological signals live on screen with PowerLab or Lt Sensors. Sampling panels in Lt can record Pulse, ECG, Respiratory Rate, Blood Pressure, and more.

Remote learning

The Human Physiology Collection comes with pre-recorded example data that students can use to achieve the desired learning outcomes, even when they can't make it to the lab.
